## Unleash the Dinosaurs

Using the latest technology on your smart phone, you can now really meet a dinosaur in your garden...

What better way is there to kickstart your adventure into pre-history?

At Barnsley Museums we've tested some of the best apps available and these are the ones we found...

Free

### Google.co.uk

Search Google for any of the dinosaurs below and the search engine will throw back the option to "see it in your space" click on "View in 3D" and you can even pose next to the creature and take a photo. These are the Dinosaurs available so far: T Rex, Velociraptor, Triceratops, Spinosaurus, Stegasaurus, Brachiosaurus, Ankylosaurus, Dilophosaurus, Pteranodon and Parasaurus

Free

### Dino Park AR+

Step through the gates and enter Jurassic Park!

This fun app allows you to wander through a parkland populated by dinosaurs- a nice gentle app, just be careful not to walk into any obstacles in the real world.

Free

From  
99p

### FX GURU

The favourite for teachers- This smart phone app adds movie special effects to wherever you film. Often used in classrooms this app allows you to stage a dinosaur rampage in your own home, classroom or garden, even including sound effects.

Although the app itself is free to download and does have lots of free special effects you do have to pay to download a dinosaur effect- this T Rex is 99p for example and you can upgrade for more at a price.

Lots of fun using this to create a film with the kids or to surprise them with a scene of destruction and film evidence of some scary visitors in the night.

### Dinosaurs!

This app is quite tricky to get the dinosaurs to look right in a small space like a house or garden but works ok in a park and the background looks blurred in all the photos I took. However one nice feature is that you can click on the dinosaurs and get information about them. Lots of annoying pop up ads.
